Test Cases

Funds Transfer:-

1) Whenever user wants to transfer the amount using funds transfer, he should be asked for a verification code.

Result:- The transfer should be allowed only if the entered verification code matches the code sent to the user's mobile number using the sms api else a error should pop up "Verification code doesn't match".

Inter bank Transfer:-

1) While choosing the bank of the beneficiary customer, the user enters the name of bank, then a list should come for choosing the state for that bank , and after choosing a particular state , a drop down list for branches in that state appear.

Result:- the ifsc code entered directly by user should match the ifsc code which comes with above process.

2) Whenever user wants to transfer the amount using inter-bank transfer, he should be asked for a verification code.

Result:- The transfer should be allowed only if the entered verification code matches the code sent to the user's mobile number using the sms api else a error should pop up "Verification code doesn't match".

Third party transfer:-

1) Whenever user wants to transfer the amount using third party transfer, he should be asked for a verification code.

Result:- The transfer should be allowed only if the entered verification code matches the code sent to the user's mobile number using the sms api else a error should pop up "Verification code doesn't match".
